Precision for health

Tough and generously designed for all weight classes

High capacity, a robust platform and equipped with all important functions for maximum weighing comfort in the fields of general medicine, nephrology, endocrinology and internal medicine: the seca 703 digital column scale is ideal for overweight patients.

Very high capacity and stability

The seca 703 has been specially designed for weighing overweight patients. Besides having a capacity of 550 lbs, it also has a large but low platform. The cast iron base gives the scale its excellent stability.

Safe, non-slip, large platform

Due to its particularly large platform, this professional scale is safe and comfortable to mount. The ribbed rubber mat gives additional stability.

Check the patient's nutritional condition with the BMI function

At the touch of a button, the BMI value of the patient can be quickly and easily determined after weighing and entering the height. This value gives reliable information on the nutritional condition according to the WHO standard. The scale includes seca's telescoping seca 220 measuring rod thus facilitating weighing and measuring in one step.

Comfortable weighing due to TARE and HOLD functions

With the TARE function, it is possible to determine the exact net weight when a patient is dressed or is using an aid when mounting the scale. The HOLD function stores the weight even after the patient gets down off the scale, meaning that the patient can first be taken care of and the result then noted down in one's own time.

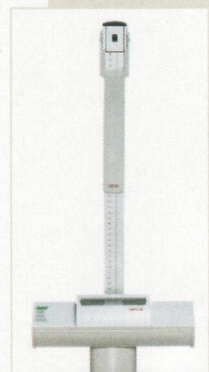

Flexible in use and almost maintenance-free

The column scale is flexible because it can be moved easily using the integrated castors and also because it is battery-powered. Up to one year's normal use is possible with just one set of batteries.

Technical data

seca 703

Capacity: 550 lbs
Graduation: 0.2 lbs / 100 g
TARE range: 550 lbs / 250 kg
Dimensions (WxHxD): 14 x 36.5 x 20.5"
Platform: 14 x 3.5 x 14"
Weight: 35 lbs
Power supply: battery / AC adapter (optional)
Transport castors
Functions: TARE, HOLD, BMI, kg/lbs switch-over
Included: Measuring rod seca 220
