

INSTALLATION GUIDE FOR THE LP1000 WINDOWS SOFTWARE

Insert the LP1000 Software CD ROM into your CD ROM drive. Go to **MY COMPUTER** and open the CD Drive. Open the **PROGRAM** folder. Double click the folder for your PC operating system type

You'll see three folders – 1000plu, 200plu and 600plu (These correspond to the LP1000 Model A, Model B and Model C, respectively). Depending on your operating system type, you may see some folders referring to Korean language. Just ignore them.

PLEASE NOTE REGARDLESS OF WHAT MODEL SCALE YOU HAVE, YOU WILL NEED TO INSTALL THE SOFTWARE FOR ALL THREE MODELS.

Install the folders as follows: 1000plu first, then 200plu then 600plu.

TO INSTALL:

Open the 1000plu folder.

Double click the executable file “**SETUP**”(with the computer icon)

The **INSTALLATION WIZARD** will appear.

Follow the prompts and accept the defaults with one exception.

When you are asked where you would like to install the software, create a separate directory (folder) for each model type.

The default directory for each model type is C:\PROGRAM FILES\RS232

Create a directory called C:\PROGRAM FILES\RS232\1000 to install the 1000plu folder.

Create a directory called C:\PROGRAM FILES\RS232\200 to install the 200plu folder.

Create a directory called C:\PROGRAM FILES\RS232\600 to install the 600plu folder.

When you have finished installing the software for each model, click on the **START** bar. Then select **PROGRAMS**. Select **1000plu** (If you have an A model).

Make sure your cable is connected between the computer and the scale. Power up the scale. Both switches on the front of the scale should be in the middle position (REG. / MANUAL)

Select the appropriate COM port and click **OPEN**.

Click the **DISPLAY** tab. Place a weight on the scale and type in a price. Click the **UPDATE** button on the PC screen.

The data from the scale display should display on the PC. If it does, it means the scale and the PC are communicating.

Click the **PLU** tab. This will allow you to enter PLU information on the computer. When you are done, left click on PLU at the top left of the screen.

Select **SAVE**. Select **PLU FILE**. This is very important. You must first save your PLU or INGREDIENTS file before downloading to the scale.

You can also save your PLU or INGREDIENTS file as an EXCEL file which will allow you to edit or print information using Microsoft Excel. **Be careful in Excel not to change the default column sizes. You won't be able to save the file correctly again as a PLU file.**

Use the **“UPLOAD”** tab to send information from the scale to the computer.

Use the **“DOWNLOAD”** tab to send information from the computer to the scale.
